Follow these simple steps to round a number to the nearest 10:

- if the number is already a multiple of 10, don't change it!
- if the ones digit is less than 5 then the number is rounded down. Simply change the ones digit to zero.
- if the ones digit is 5 or more, the number is rounded up. Simply add one to the tens digit and change the ones digit to zero.

Examples

27 is rounded **up** to 30 because the ones digit is 7.

53 is rounded **down** to 50 because the ones digit is 3.

30 is unchanged because it is already a multiple of 10.

55 is rounded **up** to 60 because the ones digit is 5.
